

Why NSi Products? | Technology

Does the term “paperless workplace” make your head spin? Is your company struggling to keep up with the new compliance and security requirements - or do you just want to manage workflows better, faster and easier? NSI's AutoStore product suite has comprehensive solutions for all of your paper and electronic document capture and management needs.

AutoStore Workflow

NSI's flagship product AUTOSTORE captures both paper and electronic documents from virtually any source and in any format. Advanced modules make this the ultimate content capture software to optimize resources and reduce business operating costs.

AutoStore Express

Contains many of the unique features of AUTOSTORE and more than satisfies the basic needs of any organization that wants to better manage their paper document workflow.

SMARTicket

Summarizes the entire document processing and routing instructions onto a single “smart” paper or electronic coversheet. Eliminates tedious manual indexing and improves compliance and audit trails.

OpenForms

Combines with AUTOSTORE or SmartTicket to analyze forms and extract data from structured and semi-structured forms. Reduces errors from manual keying and sorting.

QuickCapture

Integrates with AutoStore Express, AUTOSTORE or SMARTicket. Scanned documents are captured directly from a desktop scanner or MFP, and routed into your workflow and document management system. Ideal for high-volume processing where speed and reliability are paramount.
